

FREE Multi-platform, multi-vendor, open spec. Audio Network Configuration and Monitoring.

Discover devices on the network, and connect audio with the virtual patch bay. The audio flow, the devices connections and PTP status can be monitored in real time. ANEMAN also allows for saving and recalling connection configurations and can log events on the network. Devices can be organised in zones to fit any workflow.

- △ ANEMAN allows you to connect, monitor, and manage your networked audio devices.
- △ ANEMAN can Save and Recall a network patch to easily switch from one audio network configuration to another.
- △ ANEMAN will tell you when and why a connection cannot be made whilst giving you feedback on connection status and PTP clock status.
- △ ANEMAN is an open solution allowing new manufacturers <https://www.aneman.net/manufacturers> to add additional devices support or specific user interfaces modules.
- △ ANEMAN has already received multiple awards from the industry: an IABM Design & Innovation Award 2017, a Satis Post-Production Screen4All 2017 trophy, a 2017 High End Munich Innovation Award from Audiohub.gr and an IBC 2017 Best Of Show Award from Audio Media International.
- △ ANEMAN offers a comprehensive overall network summary display and matrix router. It will automatically manage streams on the network for you, while you setup your configuration on a higher level.
- △ ANEMAN can be integrated in an existing system to extend compatibility or simplify network setup.

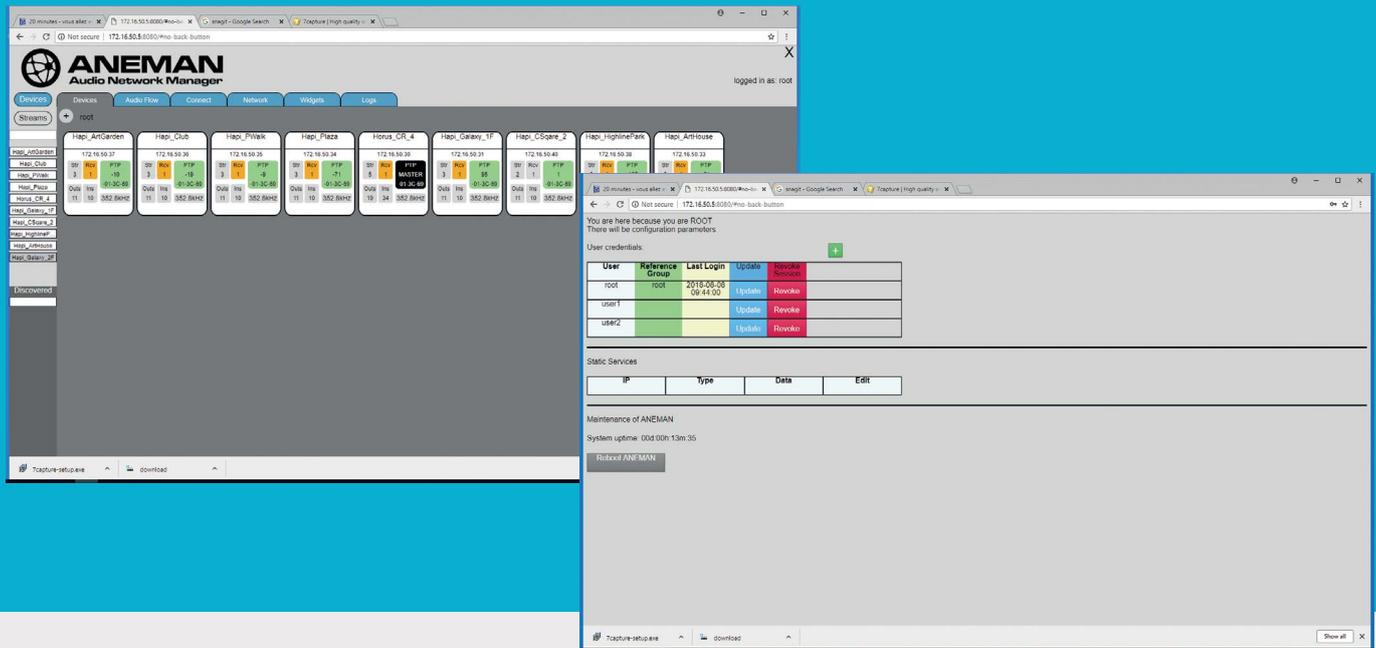

ANEMAN

Audio Network Manager

merging.com

ENTERPRISE VERSION

The Enterprise version is specifically designed for the larger installation or where customization or additional features are required. It provides a webservice that monitors and diagnoses your IP audio network and eases collaboration between users. Enhanced access control and per-zone patch, store and recall are essential requirements that makes ANEMAN Enterprise the best solution for a multi-ecosystem network.

Monitor: ANEMAN Enterprise is a web service running 24/7 on your network, it logs events on the devices and allows you to see any error in the glimpse of an eye.

Diagnose: ANEMAN Enterprise helps you track and fix errors on the network by providing an extensive set of metrics pointing you to the heart of the problem.

Collaborate: ANEMAN Enterprise is centralized and allows multiple users to access the system at the same time.

Segment: ANEMAN Enterprise allows the system administrator to segment the network in zones with different access rights per user.

Customize: ANEMAN Enterprise is fully customizable, you can modify both the user interface and the heart of your engine to fit your particular workflow specifics.

The single tool for your Audio Network

Same ecosystem as the ANEMAN Free version, offering a professional solution with integration and operation support. With ANEMAN Enterprise, Merging Technologies can also offer:

- △ Custom development for additional devices support
- △ Custom development for specific widgets and workflow
- △ Integration and network design services
